#### QUESTION 1

Which type of network can transmit data voice and video or any combination of these services over the same networks?

- A. traditional network
- B. dedicated network
- C. multimode network
- D. converged network

Correct Answer: D

---

#### QUESTION 2

How can converged networks be described?

- A. A converged network can transmit data voice, and video, or any combination of these services, over the same networks
- B. A converged network can deliver data voice and video services with various communication channels and network structure
- C. Each service in the network has its own set of rules and standards to ensure successful communication.
- D. A converged network is also known as quadruple-play services networks

Correct Answer: A

---

#### QUESTION 3

How do digital voice networks function?

- A. The voice gateway can perform only a compression function
- B. Both a digital signal and noise are boosted by amplifiers
- C. The analog signal from the telephone is digitized into PCM signals by the voice codec
- D. Digital voice networks convert the sound waves into electrical signals that are analogous to the original sound waves

Correct Answer: D

---

#### QUESTION 4

Which two features are provided by the Cisco Unified Communications Manager signaling and device control function? (Choose two )

- A. quick dialing
- B. phone book service
- C. call tear-down
- D. call setup
- E. transmission of audio/video media between endpoints

Correct Answer: CD

Signaling and device control: CUCM sets up all the signaling connections between call endpoints and directs devices such as phones, gateways, and conference bridges to establish and tear down streaming connections. Signaling is also referred to as call control and call setup/call teardown.
