QUESTION 1

Which four options can be used to authenticate a MAF application user?

- A. Facebook
- B. SSO
- C. HTTP Basic
- D. Google
- E. Mobile social
- F. O-Auth

Correct Answer: BCEF

Mobile applications may require that user credentials be verified against a remote login server (such as the Oracle Access Manager Identity Server used by Oracle ADF Fusion web applications) or a local credential store that resides on the user's device. To support local and remote connectivity modes, MAF supports these authentication protocols:

HTTP Basic Mobile-Social OAuth Web SSO By default, authentication of the mobile application user is against the remote login server regardless of the authentication protocol chosen at design time. Developers may configure the application, in the case of Oracle Access Management Mobile and Social (OAMMS) and basic authentication to enable local authentication. However, initially, because the local credential store is not populated with credentials, login to access secured application features requires authentication against a remote login server. Successful remote authentication enables the subsequent use of the local credential store, which houses the user's login credentials from the authentication server on the device. Thus, after the user is authenticated against the server within the same application session (that is, within the lifecycle of the application execution), MAF stores this authentication context locally, allowing it to be used for subsequent authentication attempts. In this case, MAF does not contact the server if the local authentication context is sufficient to authenticate the user. Although a connection to the authentication server is required for the initial authentication, continual access to this server is not required for applications using local authentication.

QUESTION 2

Select three common functionalities that are enabled when a MAF application is secured with Mobile Application Management (MAM) solutions such as Oracle Mobile Security Suite.

- A. Discover and download mobile applications from an enterprise app store.
- B. Encrypt the local database and files on the device.
- C. Display the user ID and password in a log file for debugging purposes.
- D. Enforce a data leak protection policy such as disabling copy-paste in the application.
- E. Hide UI fields that contain data not authorized by the logged-in user.

Correct Answer: ABD

QUESTION 3

For the `vtm:geographicMap` component, which two data items are returned to the `mapInputListener`?

- A. event type
- B. X/Y coordinates of the map minimum (top left) map boundary
- C. X/Y coordinates of the map center
- D. X/Y coordinates of the map maximum (bottom right) map boundary
- E. current zoom level

Correct Answer: AC

QUESTION 4

Which three are correct practices by developers who are creating a MAF application?

- A. using CSS files to override out-of-the-box styles rather than specifying custom styles in the inline style property of the individual UI component
- B. avoiding using large images in the application
- C. loading all of the application data from the server in one call to avoid having to call the same service to retrieve data again
- D. caching data in the local database when network reliability is suspect
- E. exposing server data through SOAP services rather than using REST because WSDL provides better payload documentation

Correct Answer: ABD

QUESTION 5

Which technology can be used to transform data from comma-separated values (CSV) into XML?

- A. XQuery
- B. XSLT
- C. MFL
- D. MAF

Correct Answer: A

<http://www.oracle.com/technetwork/issue-archive/2005/05-mar/o25xml-093104.html>

QUESTION 6

Which three statements are true about MAF data controls?

- A. A data control is an adapter that exposes a simpler, unified development API for MAF application developers to declaratively and programmatically access data services.
- B. Data controls expose data service structures in the data controls panel. The information exposed includes attributes, collections, and public methods.
- C. Data controls in MAF exist for remote SOAP and REST services only and handle all of the XML to Java object marshalling and unmarshalling.
- D. Data controls are configured in one or more DataControls.dcx files.
- E. MAF is restricted to ten data controls per mobile application.

Correct Answer: BCD

QUESTION 7

What is the role of Apache Cordova within the Oracle Mobile Application Framework's (MAF) architecture?

- A. It provides the APIs to make calls to external web services.
- B. It contains the JVM run time for executing Java code.
- C. It provides services for connecting to the device's services.
- D. It connects to external Apache web servers.
- E. It generates the source code stubs for your MAF application.

Correct Answer: C

QUESTION 8

You are maintaining an MAF application that has four features. You receive a request to add navigation to the default feature of your MAF application in one of the other features.

How will you implement this navigation?

- A. Use a taskflow navigation to parentTaskFlow.
- B. Use the `_backaction` in a button on your AMX page.
- C. Use `AdfmfContainerUtilities.gotoDefaultFeature` in managed bean code.
- D. Use `AdfmfJavaUtilities.findFeatureById` in managed bean code.

Correct Answer: D

QUESTION 9

When developing a MAF application for service technicians, you determine that the mobile technician will need to extensively describe the condition of the item he or she is servicing, including the area that is broken and any other pertinent details.

How would you implement this in an MAF application to avoid excessive typing?

- A. Use a remote URL page to enable the technician to specify the description in a browser- based page.
- B. Use the camera integration feature to allow the technician to take a photo of the serviced item.
- C. Use an input text area to allow for multiple lines of text.
- D. Use the voice recognition integration feature to allow the technician to enter details by voice.

Correct Answer: D

QUESTION 10

You are investigating a mobile application that uses SOAP web services that invoke queries on a database to get the data to the mobile UI. The customer complains about the application being too slow.

Which of the following changes would not improve the performance of the application?

- A. Introduce middle-tier data caching for data that does not change frequently.
- B. Switch the services from SOAP protocol to REST protocol.
- C. Reduce the number of fields returned from the service so that only the needed fields are returned.
- D. Add a layer that fetches the data on the middle tier into a Java class and then expose that class as a SOAP service.

Correct Answer: A

QUESTION 11

After importing a Feature Archive into an application, what else must you do to include its features into your application?

- A. Create a new deployment profile.
- B. Add a login URL.
- C. Add a task flow.
- D. Add one or more feature references.

Correct Answer: D

<https://docs.oracle.com/middleware/maf210/mobile/develop-maf/maf-apps-get- started.htm#ADFMF22>

QUESTION 12

From an architectural perspective, an application built by using Mobile Application Framework is a _____.

- A. mobile web application
- B. hybrid mobile application
- C. web application
- D. native mobile application
- E. responsive website

Correct Answer: A

QUESTION 13

Identify the three common tasks required on the back end to support a mobile application.

- A. Service-enable existing systems to support a REST interface.
- B. Rearchitectall existing systems to support mobile apps.
- C. Ensure that the REST services for existing systems handle necessary security protocols.
- D. Plan to secure your REST services as needed.
- E. Rearchitectyour current security strategy for your entire enterprise.

Correct Answer: ACD

QUESTION 14

Whatare two uses of MAF fragments?

- A. They can be used to standardize the layout of multiple AMX pages in your application.
- B. They allow you to embed bounded task flows as regions in your AMX pages.
- C. They are used by theamx:panelPagecomponent to provide standard locations for UI developers to drop child components in the page header, footer, and primary or secondary menu bar actions.
- D. They allow you to inject remote web pages into your AMX page similar to an iFrame.
- E. They can be used to standardize the layout of portions of your AMX pages in your application.

Correct Answer: CE

QUESTION 15

You need to write code in a managed bean that will get the list of the application's features in order to perform navigation. Which Java object has the method that you could use to get that list?

- A. AdfmfiosFeatures
- B. AdfmfContainerUtilities
- C. AdfmfFeaturesUtility
- D. AdfmfJavaUtilities
- E. You can do this only from a JavaScript library.

Correct Answer: D
