

**Exam** : **510-014**

**Title** : Ase 12.0 Server  
Administration Associate

**Version** : DEMO

1. A manual checkpoint issued in a user database:
- A. Writes a checkpoint record to each user log cache.
  - B. Flushes the tempdb database.
  - C. Writes dirty log and dirty data pages of the current database to disk.
  - D. Commits all current transactions.

**Answer: C**

2. After issuing the dbcc engine(offline) command, if that engine tasks cannot be migrated to another engine within approximately 5 minutes, then:
- A. The tasks are killed.
  - B. The command is aborted.
  - C. Only an error message is returned.
  - D. The tasks are put into a state of recv sleep.

**Answer: A**

3. Given the following command: create database test  
Which master database table will be affected by this command?

- A. sysobjects
- B. syscomments
- C. sysindexes
- D. sysdatabases

**Answer: D**

4. Which of the following can NOT be done with segments to improve performance?
- A. You can place heavily used objects on physical disks dedicated to those objects.
  - B. You can split large tables across several disks.
  - C. You can put a heavily used table on one disk and its nonclustered indexes on a separate disk.
  - D. You can put a heavily used table on one disk and its clustered index on a separate disk.

**Answer: D**

5. Cursors outside a stored procedure are optimized and compiled when:
- A. the program starts
  - B. they are declared
  - C. they are opened
  - D. the first row is fetched

**Answer: C**

6. The minimum size of a named cache is
- A. 512 Kb

- B. 1024 Kb
- C. 5.0 Mb
- D. 10 extents
- E. There is no enforced minimum size

**Answer: A**

7. Which databases are required for a properly functioning ASE 12.0?

- A. master, model, tempdb, sybsemprocs, sybsempdb
- B. master, model, tempdb, sybsemprocs, sybsecurity
- C. master, model, tempdb, sybsempdb, sybsecurity, dbccdb
- D. master, model, tempdb, dbccdb, sybsemprocs

**Answer: A**

8. ASE has the following locking schemes: (Choose 3)

- A. allpages - index page(s) and data page(s) are locked for the duration of the modification transaction
- B. datapages - locks just data page(s) for the duration of the modification transaction
- C. datapages - locks just data page(s) and index row(s) for the duration of the modification transaction
- D. datarows - locks only data row(s) and index row(s) for the duration of the modification transaction
- E. datarows - locks only data row(s) for the duration of the modification transaction

**Answer: ABE**

9. The database sybsempdb provides support for:

- A. advanced security
- B. high availability failover
- C. java classes and stored procedures
- D. distributed transaction management
- E. system stored procedures

**Answer: D**

10. To change the locking scheme for an existing table you must:

- A. unload target database using bcp out, use alter database, load the data back using bcp in
- B. use the alter table command
- C. change the server configuration for locking schemes
- D. none of the above

**Answer: B**

11. The premium features in ASE 12.0 consist of:

- A. Java in the database, High Availability, Distributed Transaction Management, Advanced Security Mechanisms

B. Java in the database, High Availability, Distributed Transaction Management, Server to Server Communications

C. Distributed Transaction Management, Advanced Security Mechanisms, Server to Server Communications

D. High Availability, Distributed Transaction Management, Advanced Security Mechanisms, Homogeneous Component Integration Services

**Answer: A**

12. Which system database is used to store intermediate results from queries?

A. master

B. model

C. tempdb

D. sybssystemprocs

**Answer: C**

13. When the server has an additional connection attempt beyond what you are licensed for, what action does the license monitor take?

A. the connection hangs until someone else disconnects

B. ASE sends an error to the user notifying them of the license restriction, and asks them to try later

C. ASE executes an extended stored procedure that pages the local SYBASE sales rep, but allows the connection attempt to succeed

D. ASE locks the violating login from using the server until an SSO unlocks this violating login

E. none of the above

**Answer: E**

14. Which three segments are created when a database is created? (Choose 3)

A. system

B. logsegment

C. dbdevice D.

default

**Answer: ABD**

15. What is the default user-defined ole behavior at login time?

A. All the user-defined roles are OFF.

B. All the user-defined roles are ON.

C. Only user-defined roles with password are ON.

D. Only user-defined roles without password are ON.

**Answer: A**

16. Which databases are required for a properly functioning ASE?

- A. master, model, tempdb, sybssystemprocs, sybssystemdb
- B. master, model, tempdb, sybssystemprocs, sybsecurity
- C. master, model, tempdb, sybssystemdb, sybsecurity, dbccdb
- D. master, model, tempdb, dbccdb, sybssystemprocs

**Answer: A**

17. When are data pages written from memory to disk?

- A. when a user issues a begin transtatement
- B. when a user issues a save transtatement
- C. when a user issues a commit transtatement
- D. when a checkpoint occurs
- E. when the user ends the client connection

**Answer: D**

18. To perform a routine backup of the transaction log for a critical production database called prod\_db use

- A. dump transaction prod\_db
- B. dump transaction prod\_db with no\_truncate C.
- dump transaction prod\_db with truncate\_only D.
- dump transaction prod\_db with no\_log
- E. Set the database option 'trunc log on chkpt' to true so that the transaction log will automatically be backed up

**Answer: A**

19. Table A has the following characteristics: Datarows locking No indexes 5000 rows 400 data pages no partitions Table B has the following characteristics: Allpages locking No indexes 5000 rows 400 data pages no partitions Using default session settings, which of the following queries will run successfully? (Choose 3)

(Choose 3)

- A. select \* from A at isolation 1
- B. select \* from B at isolation 0
- C. select \* from B at isolation 1
- D. select \* from A at isolation 0

**Answer: ACD**

20. Given:

Create table A ( a int, b int)

This table has 10,000 rows

Which of the following is the most log-intensive activity?

- A. insert A values ( 5, 7 )
- B. truncate table A
- C. delete A
- D. select \* into B from A
- E. The initial 'create table' command

**Answer: C**

# Trying our product !

- ★ **100%** Guaranteed Success
- ★ **100%** Money Back Guarantee
- ★ **365 Days** Free Update
- ★ **Instant Download** After Purchase
- ★ **24x7** Customer Support
- ★ Average **99.9%** Success Rate
- ★ More than **69,000** Satisfied Customers Worldwide
- ★ Multi-Platform capabilities - **Windows, Mac, Android, iPhone, iPod, iPad, Kindle**

## Need Help

Please provide as much detail as possible so we can best assist you.

To update a previously submitted ticket:

 <p><b>One Year Free Update</b> Free update is available within One Year after your purchase. After One Year, you will get 50% discounts for updating. And we are proud to boast a 24/7 efficient Customer Support system via Email.</p>	 <p><b>Money Back Guarantee</b> To ensure that you are spending on quality products, we provide 100% money back guarantee for 30 days from the date of purchase.</p>	 <p><b>Security &amp; Privacy</b> We respect customer privacy. We use McAfee's security service to provide you with utmost security for your personal information &amp; peace of mind.</p>
