QUESTION 1

Which statement is true about an onClick event?

- A. It cannot be used to pop up a form.
- B. It cannot be used to launch a workflow.
- C. It cannot be used to pop up a query result.
- D. It cannot be used to trigger a state transition action.

Correct Answer: D

QUESTION 2

A business object has multiple forms, and on one of them a locator field needs to be set to Required. Which tool is used to accomplish this?

- A. Form Builder
- B. Data Modeler
- C. Data Integrator
- D. Workflow Builder

Correct Answer: A

QUESTION 3

What are two managed objects within the Administration Console?

- A. Data Modeler
- B. Agent Manager
- C. Cache Manager
- D. Report Manager
- E. Event Scheduler

Correct Answer: BC

QUESTION 4

What happens when a related portal section is deleted from the Related Portal Section library?

- A. It requires changes in the Security Manager.
- B. It permanently deletes the section from the system.
- C. It removes the section as an option for users of the particular portal.
- D. It stays on the user's portal until the next time the system is restarted.

Correct Answer: B

QUESTION 5

After making changes to a portal, what actions are required for the user to see the changes?

- A. clear the browser cache
- B. sign out and sign back in
- C. bounce the application server
- D. clear the application cache from the admin console

Correct Answer: B

QUESTION 6

Which statement is true regarding a Query task?

- A. It can only access queries created by the system user.
- B. It can only access queries created by the user that created the workflow.
- C. It can only access queries listed under the My Reports tab of the report manager.
- D. It can only access queries listed under System Reports or the Community tab of the report manager.

Correct Answer: D

QUESTION 7

What is a difference between a regular formula and an extended formula?

- A. A regular formula is required as an input to an extended formula.
- B. A regular formula does not allow conditional logic, and an extended formula does.
- C. A regular formula can only be used on a Number field, and an extended formula can be used on any field type.
- D. A regular formula allows a single input and output, and an extended formula allows for multiple inputs and outputs.

Correct Answer: B

QUESTION 8

What happens if the Reverse Association option on the association filter is set to Yes?

- A. It returns only those records with the reverse association type on the context record.
- B. It returns the records with the association type on either end of the association to the context record.
- C. It returns the records with the association type only if a reverse association is defined in the Data Modeler.
- D. It returns the records with the association type only if a reverse association is defined in the Association Manager.

Correct Answer: B

QUESTION 9

Records have been created with a field called `cstExeptionUsedLI`, and some have a value of Days Away From Work. The client has decided they want the list updated with new values and to also remove from the list Days Away From Work.

How does this affect the record?

- A. The record's list field will come up blank, the record should be updated again providing a value from the list.
- B. The system will not allow the removal of Days Away From Work since there is a record that is using that value.
- C. It does not affect the record; the record will continue to use the previous list values, and it can never use the new values for auditing purposes.
- D. It does not affect the record; the record will still have Days Away From Work as its list field value, and it can also use the new values in the list.

Correct Answer: D

QUESTION 10

What is a unique feature of the Admin Group security group in TRIRIGA?

- A. The Admin Group is not visible in the TRIRIGA Security Manager by default and can only be accessed by using the System account.
- B. Whenever a change is made to the Admin Group the permissions for all Modules are reset to Full Access and all business objects (BO) are reset to Inherit From Parent.
- C. Permission settings for all Modules, BOs, Forms, Sections, and Actions in the Admin Group are defaulted to grant Full Access permissions and cannot be changed.
- D. Members of the Admin Group are automatically allowed to access all kinds of records and most tools in the platform environment whether they have been granted explicit permission to do so or not.

Correct Answer: D
