

C9060-528^{Q&As}

IBM Spectrum Protect V8.1 Administration

Pass IBM C9060-528 Exam with 100% Guarantee

Free Download Real Questions & Answers **PDF** and **VCE** file from:

<https://www.certbus.com/c9060-528.html>

100% Passing Guarantee
100% Money Back Assurance

Following Questions and Answers are all new published by IBM Official Exam Center

-  **Instant Download** After Purchase
-  **100% Money Back** Guarantee
-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

QUESTION 1

How does an administrator check on the status of completed node-replication processes?

- A. use QUERY REPLICATION command on the source server
- B. from the Replication tab in Operations Center
- C. use QUERY REPLICATION command on the target server
- D. use QUERY REPLSERVER command on either target or source server

Correct Answer: A

QUERY REPLICATION displays information about node replication processes. Issue this command on the server that acts as a source for replicated data.

QUESTION 2

How are IBM Spectrum Protect activities, such as server migration and client logons, monitored in realtime?

- A. Run Q ACTLOG and analyze the result
- B. Run Q SESSION and Q PROCESS commands at regular intervals
- C. Run DSMADMC-CONSOLEMODE
- D. Define an alert receiver for sessions and processes and monitor the output

Correct Answer: C

Reference: https://www.ibm.com/support/knowledgecenter/en/SSGSG7_6.3.4/com.ibm.itsm.srv.doc/b_srv_admin_guide_aix.pdf

QUESTION 3

What is the purpose of REVOKEREMOTEACCESS?

- A. Restrict access from any node
- B. Disable remote access to the server
- C. Disable the web client
- D. Restrict administrators with client access privilege

Correct Answer: D

Reference https://www.ibm.com/support/knowledgecenter/en/SSEQVQ_8.1.0/client/r_opt_revokeremoteaccess.html

QUESTION 4

What are the two ways to display the amount of log usage in an IBM Spectrum Protect Server V8.1 server? (Choose two.)

- A. SHOW LOGSPACE
- B. DSMSERV DISPLAY LOG
- C. DSMSERV QUERY LOGSPACE
- D. SHOW LOG
- E. QUERY LOG

Correct Answer: DE

QUESTION 5

What is the purpose of the option REPLSTATE=ENABLED when running the UPDATE NODE command?

- A. Updates a node definition on the target server by enabling node replication
- B. Enables the replication default rule for the node
- C. Updates a node definition on the source server by enabling node replication
- D. Enables the status report for node replication

Correct Answer: B

QUESTION 6

Which statement is true regarding scheduling a reclamation process without impacting client backup in IBM Spectrum Protect?

- A. Reclamation should be allowed to happen only by the automatic threshold.
- B. Reclamation should be scheduled to start after client backups finish utilizing a duration that ends before client backups start.
- C. Reclamation is only scheduled through an administrative script.
- D. Reclamation can only be scheduled through the Operations Center.

Correct Answer: A

Volume reclamation occurs when the reclamation threshold for the container-copy storage pool is less than 100%. However, onsite volumes are not a candidate for reclamation until they are 75% full.

QUESTION 7

A storage pool hierarchy disk> tape has been set up. For faster restores, the data is kept on disk for 3 days before it is migrated to tape. How can this be achieved?

- A. Update the disk storage pool and set MIGDELAY to 3
- B. Update the disk storage pool and set REUSEDELAY to 3
- C. Set up an administrative schedule and run migration every third day
- D. Adjust high- and low-migration thresholds for the disk storage pool

Correct Answer: C

QUESTION 8

Which alert type is displayed in the Operations Center when a scheduled node backup fails?

- A. a missed icon
- B. a failed icon
- C. an unprotected icon
- D. an at-risk icon

Correct Answer: D

The Overview page of the Operations Center includes the section: TSM Clients A client is considered to be at risk if a problem occurs during its most recent scheduled backup, or during a backup that starts within a specified time interval. The term backup also includes archive operations for Tivoli Storage Manager for Enterprise Resource Planning clients. Use the information that is shown in the TSM Clients section to check for failed or missed backups and to determine whether backup schedules are running as expected.

QUESTION 9

What is the result of the REPAIR STGPOOL command?

- A. All of the damaged containers are restored.
- B. Damaged volumes in the storage pool are restored.
- C. The damaged storage pool is completely restored.
- D. Deduplicated extents in a directory-container storage pool are repaired.

Correct Answer: D

Reference: https://www.ibm.com/support/knowledgecenter/en/SSEQVQ_8.1.3/srv.reference/r_cmd_stgpool_repair.html

QUESTION 10

How can an administrator determine when the IBM Spectrum Protect server database backup starts?

- A. Configure IBM Spectrum Protect to send a page when the backup database begins
- B. Configure IBM Spectrum Protect to pop up a display when the backup database begins
- C. Configure IBM Spectrum Protect to play a sound when the backup database begins
- D. Configure IBM Spectrum Protect to send an e-mail alert when the backup database begins

Correct Answer: D

QUESTION 11

An administrator wants to restore a deleted file to a date 14 days in the past, but the file is missing the inactive file list during the restore. What caused this to happen?

- A. The retain extra parameter is set to 13.
- B. The retain minimum parameter is set to 13.
- C. The version exist parameter is set to 13.
- D. The version deleted parameter is set to 13.

Correct Answer: C

QUESTION 12

What is the purpose of the client management service (CMS)?

- A. It is software that runs on the server in order to collect remotely the licensing information from the client nodes.
- B. It enables administrators to view and understand client problems remotely using the IBM Spectrum Protect Operations Center.
- C. It enables administrators to view and understand client problems remotely using the Operating Systems log files.
- D. It is software that runs on the Operations Center in order to view and understand storage problems remotely.

Correct Answer: D

QUESTION 13

What is the purpose of specifying the option ENABLEDEDUPCACHE YES on the client?

- A. to reduce the load on the client during client backup or archive deduplication processing
- B. to provide a cached copy on the local client system of all objects that are sent to a storage pool during client backup or archive deduplication processing
- C. to ensure that the client uses the server database index to identify extents that need to be sent to the server during client backup or archive processing
- D. to create a reference database on the client that is used to identify data extents that have already been sent to the server during client backup or archive processing

Correct Answer: A

Use the enablededupcache option to specify whether you want to use a cache during client-side data deduplication. Using a local cache can reduce network traffic between the IBM Spectrum Protect server and the client.

References: https://www.ibm.com/support/knowledgecenter/en/SSEQVQ_8.1.0/client/r_opt_enablededupcache.html

QUESTION 14

Which statement is true regarding the location of deduplication statistics information?

- A. QUERY ACTLOG shows the amount of space saved by server side deduplication.
- B. QUERY ACTLOG shows the total data reduction ratio.
- C. QUERY STGPOOL shows the total data reduction ratio.
- D. QUERY STGPOOL shows the total number of deduplicated files.

Correct Answer: C

QUERY STGPOOL (Query storage pools)

Use this command to display information about one or more storage pools.

The " QUERY STGPOOL" server command may not show the correct inline dedup and compression statistics for directory-container storage pools, erroneously reporting all these values as zero (percentage)

like in the following example:

Storage Pool Name: DIRCONTPOOL

Storage Pool Type: Primary

Storage Type: DIRECTORY

.....

Deduplication Savings: 0 (0%)

Compression Savings: 0 (0%)

Total Space Saved: 0 (0%)

Incorrect Answers:

A, B: QUERY ACTLOG (Query the activity log)

Use this command to display messages generated by the server and client. This command provides filtering options that can be used to limit the number of messages displayed and the time that it takes to process this query. If you do not specify any parameters with this command, all messages generated in the previous hour are displayed.

QUESTION 15

A power outage has caused a library to go offline unexpectedly. Which command synchronizes the library inventory and the IBM Spectrum Protect database?

- A. RECONCILE LIBRARY
- B. CHECKOUT LIBRARY
- C. AUDIT LIBRARY
- D. SYNCH LIBRARY

Correct Answer: C
