- ⚙️ **365 Days** Free Update
- ⚙️ **800,000+** Satisfied Customers

QUESTION 1

Which statement describes machine learning?

- A. Organizes data efficiently so that compute systems can learn
- B. Replicating a detailed process and then implementing it in software
- C. Developing a program to compute every possible outcome
- D. Applies an algorithm to large amounts of data for pattern discovery

Correct Answer: D

QUESTION 2

When should FCIP be used to interconnect FC SANs?

- A. to converge FC and IP traffic onto a single network transport within a distance of 200 km
- B. to interconnect local and remote FC SANs at distances within 200 km
- C. to converge FC and IP traffic onto a single network transport at distances greater than 200 km
- D. to interconnect local and remote FC SANs at distances greater than 200 km

Correct Answer: D

QUESTION 3

What set of factors are used to calculate the disk service time of a hard disk drive?

- A. Seek time Rotational latency Data transfer rate
- B. Seek time Rotational latency I/O operations per second
- C. Seek time Rotational latency RAID level
- D. Seek time Rotational latency Bandwidth

Correct Answer: A

QUESTION 4

What is true about a software defined data center?

- A. IT resource components are virtualized except commodity hardware used to create resource pools
- B. Management operations are dependent of underlying hardware configuration
- C. Services listed in the service portal are updated automatically using orchestration tool
- D. Management functions are moved to an external software controller

Correct Answer: C

QUESTION 5

An organization wants to prevent incidents which share common symptoms or root causes from reoccurring. They also want to minimize the adverse impact of incidents that cannot be prevented. Which management function addresses the organization's requirements?

- A. Incident management
- B. Security management
- C. Problem management
- D. Availability management

Correct Answer: C

QUESTION 6

What is an impact of a Denial of Service (DoS) attack?

- A. Compromises user accounts and data to malicious insiders
- B. Hijacks privileges to compromise data security
- C. Prevents legitimate users from accessing IT resources or service
- D. Duplicates user credentials to compromise data security

Correct Answer: C

QUESTION 7

An Ethernet switch has eight ports and all ports must be operational for 24 hours from Monday through Friday.

However, failures of Port 6 occur within the week as follows:

Tuesday = 6 AM to 8 AM Thursday = 5 PM to 10 PM Friday = 7 AM to 9 AM

What is the MTBF of Port 6?

- A. 32 hours
- B. 37 hours
- C. 30 hours
- D. 40 hours

Correct Answer: B

QUESTION 8

Which standard provides lossless transport to an FCoE Ethernet network?

- A. Data Center Bridging Capability Exchange
- B. Priority-based Flow Control
- C. Remote Direct Memory Access
- D. Data Center Bridging

Correct Answer: D

QUESTION 9

What is the purpose of data archiving?

- A. Transfers xed content that is actively accessed to archive storage
- B. Transfers dynamic content that is no longer actively accessed to archive storage
- C. Transfers dynamic content that is actively accessed to archive storage
- D. Transfers xed content that is no longer actively accessed to archive storage

Correct Answer: D

QUESTION 10

Which block storage device protocol achieves the optimal cost-effective balance between I/O performance and high storage capacity for midrange storage applications?

- A. SAS
- B. NVMe
- C. SATA
- D. SSD

Correct Answer: A
