QUESTION 3

A Corporate Finance application is being developed.

The application adds or updates the Receivable logical file and the Payable logical file. The user requires that this information is sent to the Accounts application to keep accounting records consistent. The combined receivable and payable data is sent to the Accounts application daily at 8:00 PM. When implementing a solution to send the receivable and payable information, it was decided to include a header and trailer record with the accounts information. These records are used by the Corporate Finance user to ensure that

everything was technically correct when transmitting the file.

From the Names of Possible Functions listed identify the transactional functions for the Corporate Finance application. Select N/A if a Name of Possible Function does not apply.

Identify the functions used:

B. Processing logic

C. Maintain

D. User identifiable

Correct Answer: B

QUESTION 7

Which of the following statements regarding EIF counting is true?

A. If an EIF is used in multiple processes, count the EIF as many times as the number of processes

B. Every physical file referenced by an application is to be counted as an EIF for the application

C. If a group of data was not counted as an ILF, then it should be counted as an EIF

D. None of the above

Correct Answer: D

QUESTION 8

Which of the following statements regarding DET counting is (are) true?

A. Attributes referenced by the application being measured are not counted

B. Do not count a DET for attribute required by the user to establish a relationship with another data function

C. Count a DET for each attribute required by the user to establish a relationship with another data function

D. Both A and C

Correct Answer: C

QUESTION 9

A Call Center (CC) application is being enhanced to track two new pieces of Information. The CC will reference the two new DETs in five modified data functions.

Determine the complexity of the following functions:

Select the complexity for each function:
