QUESTION 1

Which device would an Evil Twin attack use to lure the victim to connect to the attack surface network?

A. switch

B. firewall

C. router

D. access point

Correct Answer: D

QUESTION 2

Which option describes a characteristic of a next-generation firewall but not a UTM device?

A. Content inspection engines operate in individual silos.

B. Content inspection engines use tightly integrated operation.

C. Content inspection engines process traffic serially, not in parallel.

D. Content inspection engines run on the same hardware and memory resources.

Correct Answer: B

QUESTION 3

DRAG DROP

Match the tool to its capability.

Select and Place:

Correct Answer:

Nmap	port scanner	
Nessus	vulnerability scanner	
Wireshark	network analyzer	

QUESTION 4

Assume that it is your responsibility to secure the software functioning at top five layers in the exhibit.

Which cloud service model type is represented?

Data

Applications

Runtime

Middleware

Operating System

Virtualization

Compute

Storage

Networking

A. software as a service

B. platform as a service

C. infrastructure as a service

D. on-premises

Correct Answer: C

QUESTION 5

Which Palo Alto Networks product or feature includes machine learning to enhance security?

A. Panorama

B. MineMeld

C. Magnifier

D. User-ID

Correct Answer: C

QUESTION 6

In which type of cloud computing service does an organization own and control application data, but not the application?

A. platform as a service

B. computing as a service

C. infrastructure as a service

D. software as a service

Correct Answer: D

QUESTION 7

DRAG DROP

Match the network infrastructure item with its corresponding description.

Select and Place:

router	Drag answer here	provides data to systems on a LAN, WAN, or over the internet
firewall	Drag answer here	connects to electronic resources through network architecture
server	Drag answer here	forwards packets from one network to another based on destination address
client	Drag answer here	connects global WAN computer systems across the world
internet	Drag answer here	prevents unauthorized communication between computer networks and hosts

Correct Answer:

router	forwards packets from one network to another based on destination address
firewall	prevents unauthorized communication between computer networks and hosts
server	provides data to systems on a LAN, WAN, or over the internet
client	connects to electronic resources through network architecture
internet	connects global WAN computer systems across the world

QUESTION 8

Assume that it is your responsibility to secure the software functioning at all layers in the exhibit.

Which cloud service model type is represented?

A. software as a service

B. platform as a service

C. infrastructure as a service

D. on-premises

Correct Answer: D

QUESTION 9

Which mobile device management feature prevents jailbreaking or rooting?

A. software distribution

B. malware protection

C. policy enforcement

D. data loss prevention

Correct Answer: C

QUESTION 10

Which type of adversary would commit cybercrimes with the authorization of their country\\\'s government?

A. state-sponsored

B. hacktivist

C. gray hat

D. white hat

Correct Answer: A

QUESTION 11

A firewall located on an organization\\\'s network perimeter can be used to protect against which type of attack?

A. a malicious SaaS application file accessed from an unmanaged mobile phone

B. ransomware installed from an infected USB drive

C. malware installed on the laptop by a disgruntled employee

D. a malicious PDF file located on an internet website

Correct Answer: D

QUESTION 12

DRAG DROP

Match the OSI network model Layer 3 function to the correct description.

Select and Place:

routing	Drag answer here		provides service to direct packets to their destination host
encapsulation	Drag answer here		wraps transport layer data in IP packets
decapsulation	Drag answer here		provides segments or datagrams to the transport layer
addressing	Drag answer here		provides a mechanism for identifying end devices

Correct Answer:

routing	provides service to direct packets to their destination host	
encapsulation	wraps transport layer data in IP packets	
decapsulation	provides segments or datagrams to the transport layer	
addressing	provides a mechanism for identifying end devices	

QUESTION 13

Which protocol converts voice into a digital signal?

A. IVO

B. VoIP

C. SNMP

D. IGMP

Correct Answer: B

QUESTION 14

During which step of the cyber-attack lifecycle is a user\\'s web browser redirected to a webpage that automatically downloads malware to the endpoint?

A. delivery

B. weaponization

C. reconnaissance

D. command-and-control

Correct Answer: A

QUESTION 15

What does Palo Alto Networks Traps do first when an endpoint is asked to run an executable?

A. send the executable to WildFire

B. run a static analysis

C. run a dynamic analysis

D. check its execution policy

Correct Answer: D
